

## Developer Support

Fully leveraging the power of Salesforce and the Force.com platform involves creating custom applications, s-controls, and integrations with other applications. To support developers and application builders, salesforce.com programming languages, and community discussion boards.

Although you may be an expert in a particular programming environment, you may still need expert advice on building custom solutions on the Force.com platform. For specific development-related questions, salesforce.com offers Developer Support services to provide you with a quick response to any questions not fully answered by API documentation or other resources.

Developer Support is included to Premier Support customers at no extra charge. For customers, incubators and partners with Basic Support, pricing options are available below.

### Application Design

Although there are many ways to develop custom applications on the Force.com platform, not all of them result in equally efficient, robust, or elegant code. Developer Support assists developers by analyzing the performance objectives of planned applications and recommending best practices for achieving those objectives, based on available Salesforce functionality and our pooled knowledge.

For example, if a developer needs to manipulate Salesforce data and present it within the Salesforce user interface, a developer support engineer from our team of experts will recommend specific tables, fields, and functionality that will accomplish that goal effectively and quickly. This is particularly important with Apex code, where developers must be mindful of governor limits and other features particular to running applications in a multi-tenant environment.

### Benefits

With Developer Support, you can avoid hours of research and testing. You don't have to spend time becoming an expert on the Force.com Web Services API; instead, you can focus on creating the functionality that your users value most.

Developer Support benefits include:

- :: Reduced development time, resulting in faster time to market
- :: Faster deployment of customizations
- :: Business flexibility to expand your development capabilities without adding staff
- :: In-depth code analysis and recommendations (up to 200 lines)
- :: Error message troubleshooting and exception handling
- :: Four-hour response time for rapid issue resolution
- :: Assigned resources that support Apex, Java, AJAX, JavaScript, .NET, and PHP

### Details

Categories		
Apex Code	Building Apex code that runs natively on Force.com servers, including triggers, classes, and the Apex code Debugger	Explanation of governor limits ANT Build Process Error message troubleshooting Apex code best practices Analysis and debugging of classes and triggers (up to 200 lines)
Force.com Web Services API	Integrating with the Force.com API through external Java, .NET, JavaScript, or PHP custom code	Coding best practices Error message troubleshooting Analysis and debugging of custom code (up to 200 lines)
AJAX Toolkit	Utilizing the Force.com AJAX Toolkit to embed API calls in fields and s-controls	S-control explanation Error message troubleshooting AJAX Toolkit best practices Analysis and debugging of custom code (up to 200 lines)
