

Sample Image Formula Fields

Description

Salesforce formula fields can incorporate images so rather than simply describing a product with words and specs, you now provide a picture of it for Salesforce users. Or use stock charts or status markers to communicate data visually. To make it easy for you to see how these images work, this component provides links to nine samples on a stand-alone custom tab. Find an image here you would like to use? You can easily reverse engineer and re-use these fields with any of the other objects in your account. To do so, you simply cut and paste the formula and change the merge fields.

Benefits

- Lets users see how they can use images in formula fields for greater impact
- Installs sample image fields on a stand-alone tab in your Salesforce account
- Provides sample formulas you can copy and apply to other objects in your account

Setup

Step	Instruction
1.	Download and deploy the custom tab.
2.	Click on the tab to examine the fields.
3.	View the source code for these fields by going to Setup :: App Setup :: Build :: Custom Objects.
