Sub processors

Last updated October 19, 2022

Traction Sales and Marketing Inc. relies on certain sub-processors to provide our services. For our customers that are subject to the General Data Protection Regulation or any similar privacy and/or data security regulations, we have provided a list of all the sub-processors our family of companies currently rely on to perform various personal data processing functions in support of our services.

The sub-processors listed below have or potentially will have access to or process our customers' personal data. Depending on, among other things, the location of the customer's data and the nature of the customer's needs, we may share our customers' personal data with some but not all of these sub-processors.

All of our sub-processors are subject to contractual requirements to process our customers' personal data in accordance with our instructions and applicable law.

We will post updates to this website in the event we add or modify any of the sub-processors we use.

- Smartsheet
- Microsoft
- GSuite
- Atlassian
- Uncommon Purpose
- Salesforce
