

Manage security controls in a single view with Security Center

Strengthen your security posture

Security Center provides a single view into the security configuration and controls in place across your entire Salesforce environment. With native support for both single and multi-org environments, Security Center makes it easy to understand your Salesforce security posture and simplifies how you manage your security, compliance, and governance metrics.

Proactive security for the agentic era*

Streamline security management with AI. Agentforce detects, surfaces, and instantly analyzes potential threats, providing a comprehensive summary – from suspicious logins to exported reports – so you can quickly take action like freezing a user.

Three Reasons to use Security Center

1. Reduce Security Risks

Quickly identify changes to key permissions and metrics with proactive alerts. Remediate threat exposure and reduce risk with automated risk assessments.

2. Eliminate Blind Spots

Classify data to identify sensitive information and apply consistent security policies across your Salesforce footprint. Use AI-driven insights to detect potential security threats or atypical user activity.

3. Improve Security Posture

Track security metrics from Setup, Event Monitoring, Encryption Settings, Object Manager, and more to help you reach your compliance goals.

Use Cases

Visibility Across Orgs

View key security metrics across your Production and Sandbox orgs to respond to threats and anomalies faster.

Deploy Consistent Policies

Configure security policies once and easily deploy to all connected tenants, ensuring consistency across tenants and eliminating manual duplicate work.

Permission Configuration

Evaluate the assignment of sensitive user and data permissions.

Posture Tracking and Alerting

Analyze your current security posture against historical data across your orgs and be proactively alerted of key changes.

Data Access Controls

Classify sensitive data across your Salesforce org, enforce least privilege access, and strengthen compliance with various data protection laws and regulations.

Risk Remediation Plans

Generate one-click security posture reports, simplifying communication for audit, compliance, and security stakeholders.

Why implement Security Center at your business?

is the average cost of a data breach worldwide¹

How it works

Security Center

Product Features

Agentforce in Security Center

Surface anomalies and summarize user activity to quickly investigate and remediate security threats with Agentforce.

User Permissions and Org Configurations

Track sensitive data permissions over time and monitor key org configuration metrics, including installed packages, connected apps, and Health Check scores.

Security Policies

With simple clicks, automatically deploy org-level Policies, such as Password Policies and Session Settings, to all of your connected Tenants.

Proactive Alerts

Easily configure alerts to be notified when there are changes to security metrics important to your business.

Data Classification

Reach risk and compliance goals faster through data classification by identifying sensitive fields with prebuilt and customizable categorization templates, advanced filtering, and bulk classification.

Risk Intelligence

Leverage codified Salesforce security expertise to surface and prioritize risks with automated risk intelligence, prescriptive guidance for remediation, and comprehensive audit reports.
