

Salesforce Accessibility Conformance Report International Edition

VPAT® (Voluntary Product Accessibility Template®) version 2.5Rev

Name of Product Version:	Energy & Utilities Cloud for Sales Summer '26
Report Date:	May 2026
Product Description:	Tariff Comparison: Sales and service representatives can use tariff comparison to quickly and efficiently compare energy product offerings and service rates. Representatives can suggest fully-priced offers to end customers and facilitate their enrollment in new products and services. Sales representatives can perform the following tasks: • Suggest fully priced, eligible product offers to customers during discussions. This helps them sell more products and increase sales. • Suggest cheaper products to known customers based on how much they use, where they live, and what service they use. This helps to reduce high bill worries and start plan changes. • Give detailed information about products that a customer asks about. This helps them make smart decisions and makes it easy to sign up for or change plans right away. • Enroll customers with products that the customers are interested in, streamlining the sales and service process. Site Bulk Upload: Large commercial and industrial customers with many service points can efficiently upload site data by using CSV files. It enables sales support teams and Salesforce admins to import large volumes of service point (site) data directly into an Opportunity or Quote by using standard CSV files. Multi-Site Quoting: Multisite quoting enables sales representatives to organize a customer's service points and premises into logical groups, resolving these challenges. Representatives manage groups instead of individual sites. Sales representatives

	apply product configurations, promotions, and discounts to a group, and the system automatically applies these settings to every group member. The grouped approach ensures accurate and efficient pricing for complex multi-location deals. Auto Quote: Sales rep need an automated way of generating quotes and orders for large accounts without creating groups and by applying the same product configuration to each group recipient. Tariff Comparison Experience cloud support: Self-service customers require intuitive tools to view eligible products, compare options, and receive relevant recommendations. Without these capabilities, sales opportunities are missed and customers may not choose the most suitable products.
