

Salesforce Carbon Credit Portfolio

Salesforce Carbon Credit Portfolio

At Salesforce, we believe that carbon credits – and carbon markets more generally – are critical tools that, when made and used well, can play an important role in our collective journey to a net zero and nature-positive world. The table below details the portfolio of carbon credits we, or our suppliers on our behalf, purchased for our residual Scope 1, 2 (market-based), and 3 emissions in FY25. As a general note, all of the carbon credits that we purchase and use are registered with leading carbon market standards programs that require independent, third-party verification of projects and the corresponding emission reductions and/or removals achieved.
